

Problem-Solution Fit

Date	8 July 2026
Team ID	SWTID-2026-5447
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] Young professionals, salaried individuals, students, and first-time credit card applicants (age 21–35).	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] Limited credit history, low/irregular income, lack of financial awareness, strict eligibility criteria.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Traditional rule-based approval by banks. Pros: Human oversight, established process. Cons: Slow & less accurate, manual verification (time-consuming, prone to errors).
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] - High rejection rate – High Frequency - Long approval time – High Frequency - Unclear eligibility criteria – High Frequency - Lack of transparency – Medium Frequency	9. PROBLEM ROOT / CAUSE [RC] Inaccurate risk assessment, manual evaluation, scattered data, inability to analyze multiple factors together.	7. BEHAVIOR + ITS INTENSITY [BE] Applicants compare offers, seek quick approvals, provide incomplete/incorrect information, check status frequently.
3. TRIGGERS TO ACT [TR] Need for credit card, pre-approved offers, lifestyle upgrades, emergencies, peer influence.	10. YOUR SOLUTION [SL] Machine Learning model using Random Forest to predict credit card approval status based on applicant data like income, employment, credit score for fast and accurate decisions.	8. CHANNELS OF BEHAVIOR [CH] ONLINE Bank websites, mobile apps, fintech platforms, digital advertisements. OFFLINE Bank branches, agents, customer support.
4. EMOTIONS BEFORE / AFTER [EM] Before: Anxious, uncertain, worried about rejection. After: Relieved, satisfied, confident.
